

## Mentoring Activities

My major contribution to UAMS teaching mission is the longitudinal mentoring activities that I have participated in. I have been extremely lucky to have worked with a talented group of mentees. 18 mentees are listed below with whom I have worked closely over the years. Several MD mentees have joined academics and continue to collaborate with me. One of my mentees has attained the rank of Associate Professor at the University of Virginia recently. I have not limited mentoring to MD mentees. One of my research assistants is currently completing pharmacy school and another joined medical school.
